# What is JEWEL?

## **Introduction:**

**Jewel Token is a reflect token built on Binance Smart Chain. Binance Chain is like Ethereum but with lower gas costs due to mining structure.**

**There is a minimum 1% fee on all transfers of Jewel Token to be distributed to holders on Binance-Jewel liquidity.**

**The future release of yield farms and pools will not conflict with the fee structure. Staking Jewel in a Farm through JewelSwap will not reduce fee payments.**

# **Tokenomics**

**How was it  
created?**

## **Tokenomics:**

**Jewel token was created with 5 Million tokens, of those 2% were sent to the dev account for Liquidity Pool creation required to start the contract with the remainder to be burned. The remaining 98% is held in the contract.**

**Jewel Token uses a unique authority structure, the Governance address is allowed to mint tokens, the owner is held to enforce security.**

# **Security**

**Built in standards**

## **Safety:**

**Jewel token was built with security in mind. Recent flash attacks and exploits on Binance Smart Chain raise concerns for old token standards.**

**Jewel Token can isolate and ban flash attack perpetrators to remove the threat they pose. A feature offered by few tokens.**
